

# iSolate™ nanotech

## The best moisture protection in the industry

- iSolate™ nanotech works by coating all elements of the hearing instrument with a thin protective layer that bonds at a molecular level with the internal and external components, shielding them from moisture without affecting performance.

- This process changes the surface properties of all parts of the hearing instruments to be extremely liquid repellent.

360° application in vacuum chamber

All components completely covered - protection inside & out

Moisture beads up & rolls off

iSolate microphone filters for moisture and dirt protection
